INTERACRETE

The integrated industrial complex for concrete and asphalt products in the Delta region.

FISCAL YEAR: 2026

UPDATED AND ALIGNED WITH CURRENT ECONOMIC VARIABLES

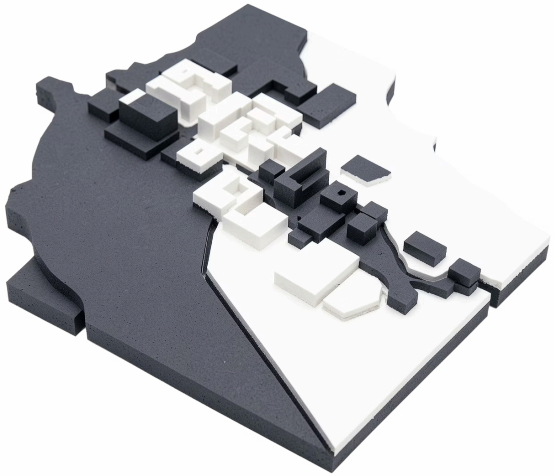
We are driving a boom in the manufacturing of concrete and asphalt products in the Delta region through a unique business model that combines advanced automated manufacturing with immediate on-site execution.

Strategic Transition Surge

Highlighting the shift from the current limited activity to the large-scale capital entity built on strong assets.

Comparison Aspect	Current State (Restricted Workshop)	Target State (Integrated Complex)
Business Structure	Limited manual production (factory land sale)	Advanced automated production + field road execution and paving
Land Area	1,060 square meters (lease)	1.5 feddans = 6,300 square meters (owned in Damanhour)
Technology	Fully manual (high waste and standard specifications)	Fully automated (German) + electronic batch asphalt plant
Daily Capacity	100 to 150 square meters of interlock	1,000 m^2 interlock + 240 tons of asphalt daily
Capital Expenditure (CAPEX)	Nearly nonexistent (weak assets)	**80,000,000 Egyptian pounds** (strong production assets)

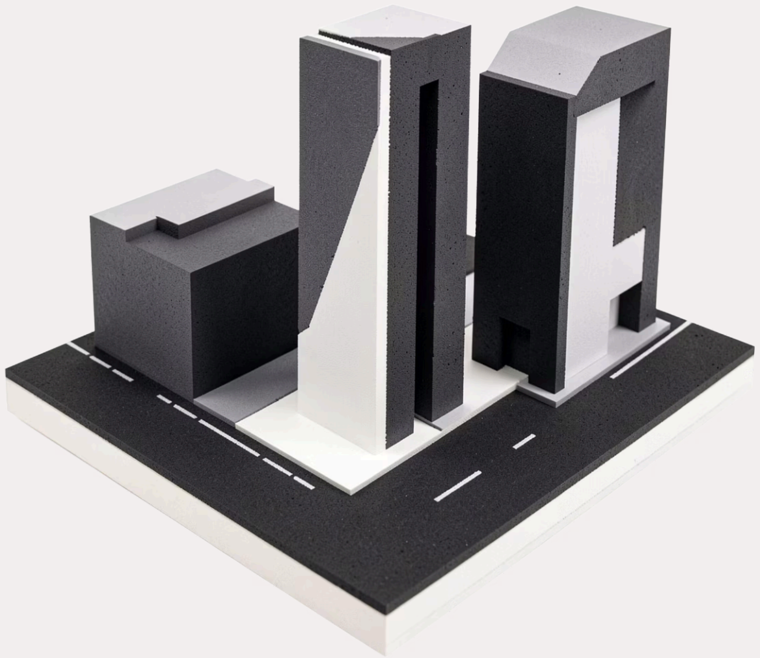
The Market Problem



Severe Geographic Logistics Gap
Absence of modern, automated factories specialized in producing high-stress interlock and asphalt plants within the Delta region (specifically Beheira Governorate).

Cost and Waste Drain
Dependence of all Delta contractors and national projects on bringing cement-based materials and asphalt from factories outside the region, causing significantly higher shipping and transportation costs and increased waste rates.

Operational Consequences
Delays in project timelines and supply chains for national and private projects due to the lack of a nearby, technically approved supplier.



Integrated Solution – A Three-Dimensional System

Establishing the **INTERACRETE** complex in Damanhour as a three-dimensional system operating as a "single interconnected unit" to close the operational gap.

🏗️ Interlock and Block Production Sector

Fully automated production line for high-strength colored block and interlock production.

- Production capacity: 1,000 m^2 per day
- High-reliability German technology
- Compliant with the highest engineering standards

🛢️ Asphalt Mix Manufacturing Sector

Advanced Asphalt Batching Plant.

- Capacity: 60 to 80 tons per hour
- Integrated PLC electronic control
- Baghouse environmental filters

🚧 Contracting and Road Paving Sector

Integrated field equipment fleet to provide immediate supply and execution services.

- Asphalt paver + steel and rubber rollers
- Integrated spray tanker
- Supply + immediate on-site execution

Technical and Operational Capability

Automated Interlock Line PRS 602

German technology and components of high reliability to produce outputs that meet the highest engineering standards.

Electronic Asphalt Plant

Equipped with an electronic mixing and screening tower (PLC), cold feed bins, and a thermal dryer to ensure mix precision.

Environmental Shield – Baghouse Filter

A massive fabric filter system to capture dust and recycle it, protecting the factory from violations and ensuring license sustainability.

Integrated Technical Quality Laboratory

A fully equipped testing lab (concrete presses and Marshall asphalt tests) to deliver engineering-certified products with strengths from 250 to 450 kg/cm².

Target Market and Business Model

Government Sector (B2G)

- Road paving tenders and local authorities
- Governorate and infrastructure projects
- Rural development initiatives (Haya Karima)

Companies and Contractors (B2B)

- Contracting companies of all sizes (large, medium, and small)
- Real estate developers seeking quality and shipping cost savings

Revenue Generation and Sustainable Returns

1 **Direct Sales and Supply**

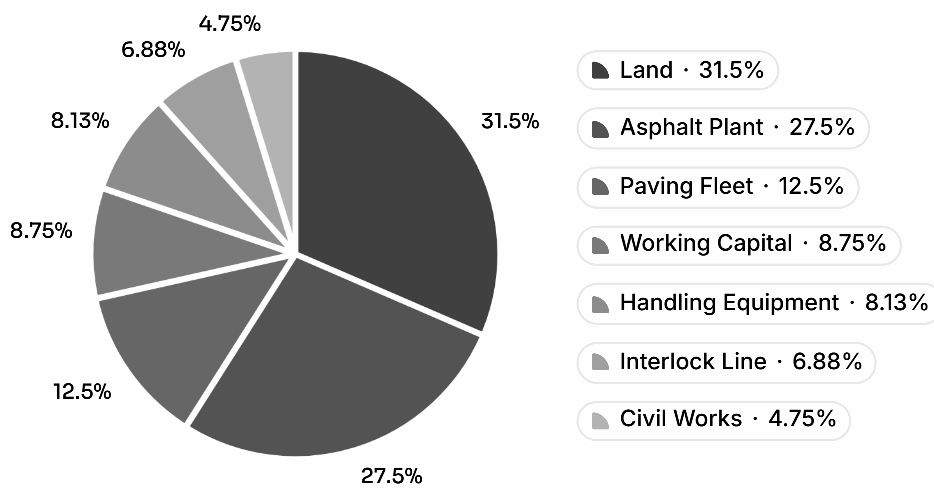
Selling large volumes ex-factory at competitive prices supported by geographic proximity.

2 **Supply + Execution Packages**

Integrated high-margin packages that include supply and field execution with the company fleet to boost competitiveness in tenders.

Capital Budget and Expenditure Categories (CAPEX)

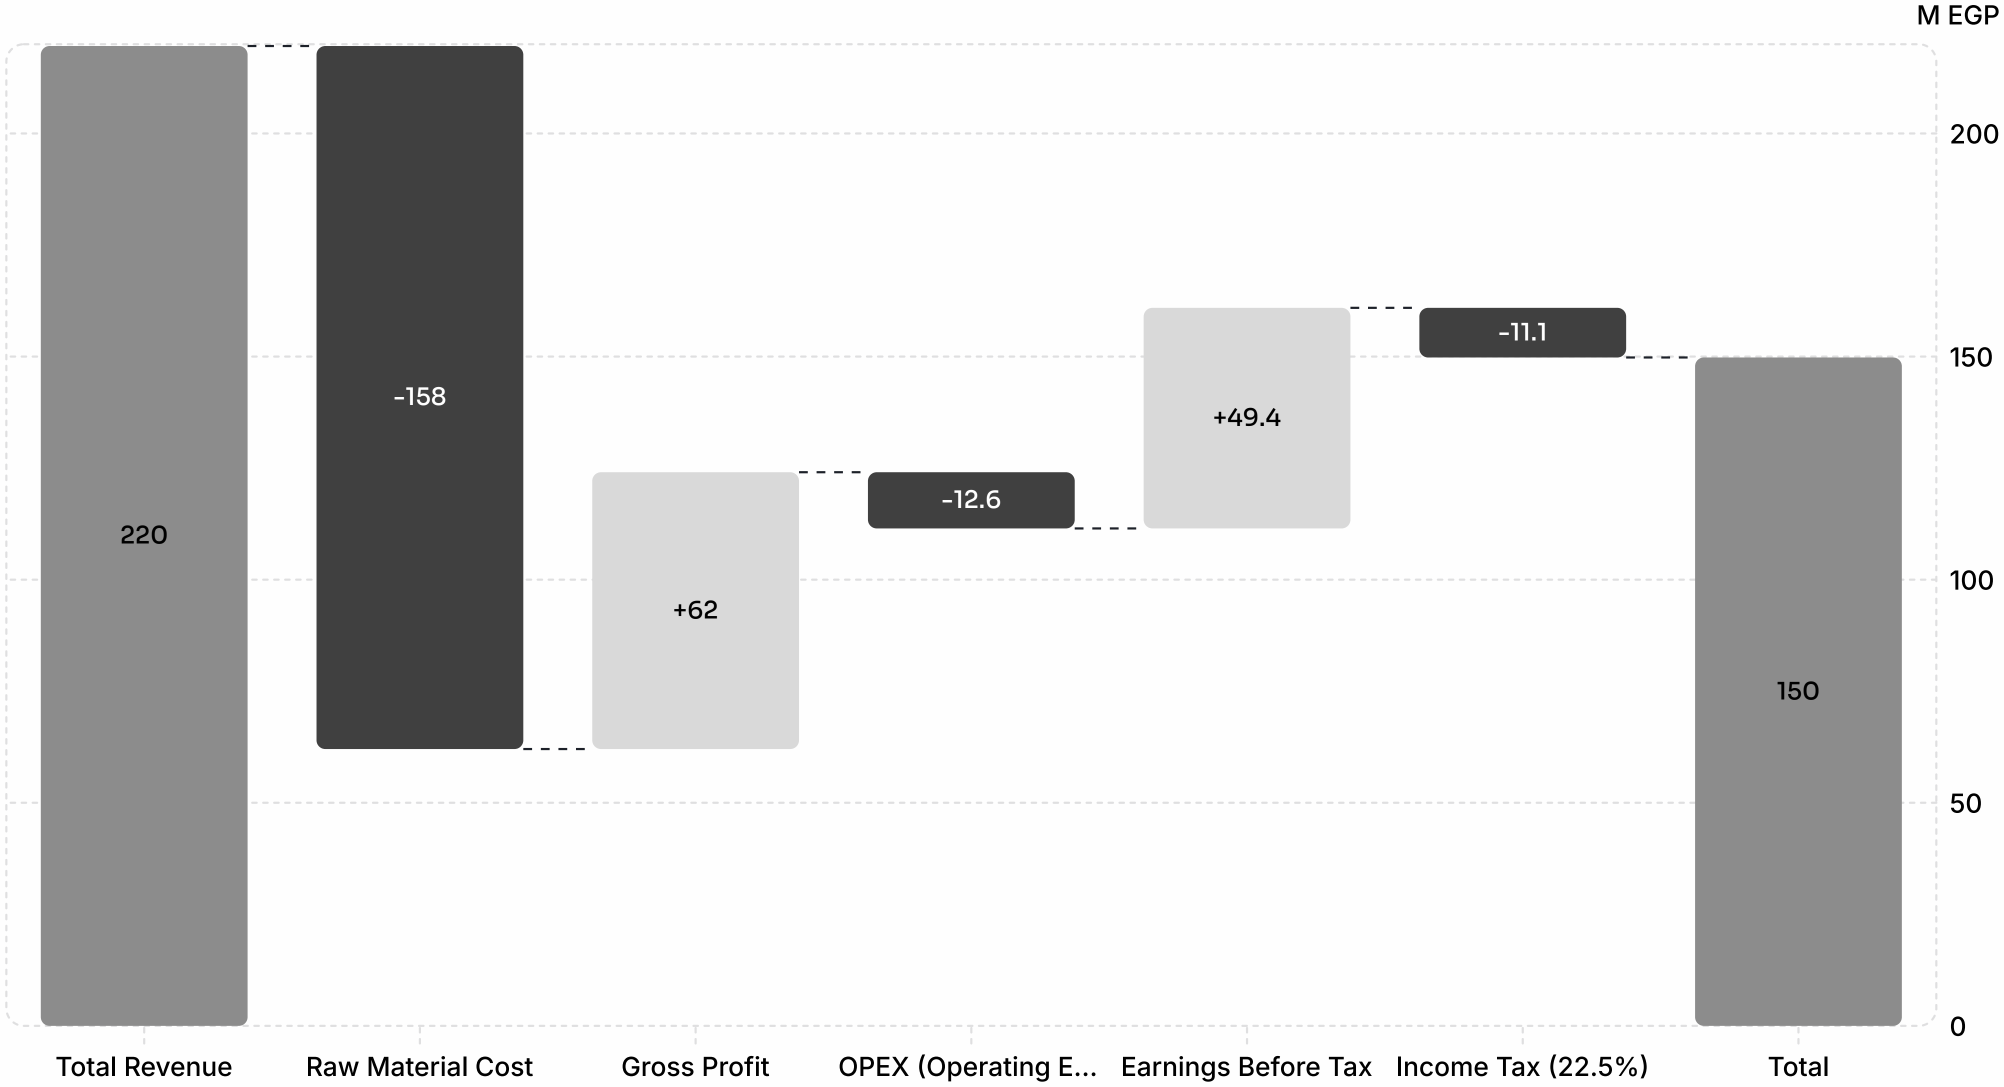
Total investment capital required to establish and operate the entire complex for 2026 is **80,000,000 Egyptian pounds**.



Investment Item	Cost (EGP)
Project land (1.5 feddans, owned in Damanhour)	25,200,000
Asphalt plant (60-80 tons/hour + filters)	22,000,000
Paving fleet (paver + rollers + tanker)	10,000,000
Working capital (operational liquidity)	7,000,000
Material handling equipment (2 loaders + forklift)	6,500,000
Automated interlock line PRS 602	5,500,000
Equipment and construction (hangars + transformer)	3,800,000

Projected Annual Performance and Income Statement

The figures were calculated based on 2026 market prices and aligned with raw material costs and current inflation at a safe operating capacity of 80%.



219.6M

Total Revenue

EGP annually at 80% operating capacity

62M

Gross Profit

Gross Profit after deducting direct raw material costs

38.3M

Annual Net Profit

After taxes — net margin of 17.45%

Overall annual net profit margin: **17.45%** — an excellent safety indicator against inflation.

Investment Efficiency and Attractiveness Indicators

⏱️ Capital Payback Period

1 year and 11 months only (1.91 Years) from the actual commercial launch of the complex and full recovery of the CAPEX value of 80 million pounds.

📈 Simple Return on Investment (ROI)

47.89% annually — an exceptional return driven by integrating the contracting and direct execution sector within the integrated system.

📊 Internal Rate of Return (IRR)

48% to 52% — far exceeds the current bank interest rate in Egypt (19.00%), proving the economic viability of directing liquidity to the project.

47.89%

ROI Return on Investment

Compared to the bank interest rate of 19%

52%

Upper limit of IRR

Actual internal rate of return

19%

Bank interest rate

The current rate in Egypt 2026

Conclusion and Investment Request

> "Together, let us lead the future of integrated infrastructure in Delta."

The Target Investment Path

We are seeking an investment partner / capital financing to execute the full "fast track" and launch the complex, ensuring commercial operation within a maximum period of **8 to 10 months**.

- Total CAPEX required: **80,000,000 Egyptian pounds**
  Expected return: **47.89% annually**
  Payback period: **Less than two years**

Contact Information
